Types of tiles

Porcelain and non-porcelain tiles: Porcelain tiles are made by using clay, under high pressure and temperature, and they come with a higher solidity, quality and resistance than non-porcelain. Their texture is more compact, so they are less permeable to water. These features have made porcelain tiles a good and permanent choice and offered as an advanced and improved product.

Cement tiles

These tiles are very durable and that's because a layer of diluted cement and the layers of sand and cement are combined. These tiles are made using high-pressure electric hydraulic devices, which allow the cement layers to be fully compressed to produce a high-quality tile. These tiles have a hard surface that indicates their longer life

Mosaic tiles

Brick tiles have been commonly used due to their diversity. These tiles are a combination of different materials such as glass, ceramic, porcelain or stone that are produced in small sizes. They are first pre-installed on plastic or paper sheets and then they are ready for use.

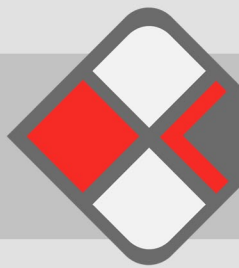

Brick tiles

Brick tiles are one of the most popular tiles. The appearance of these tiles is similar to brick, but their function and application are completely different. They have a long shelf-life and do not lose their color and appearance over time. These tiles are used in the exterior of the building, the yard walls and even inside the building.

Glazed and unglazed tile

Glazed tiles are covered with a layer of liquid glass before the baking process, but unglazed tiles have no additional coating and are prepared after baking. Glazed tiles have a glossy and slippery surface, so they are mostly used in residential buildings and they are very easy to clean, but glazed tiles have a non-slip surface due to their anti-slip surface, therefore, they are used in open spaces, commercial areas as well as wet areas.

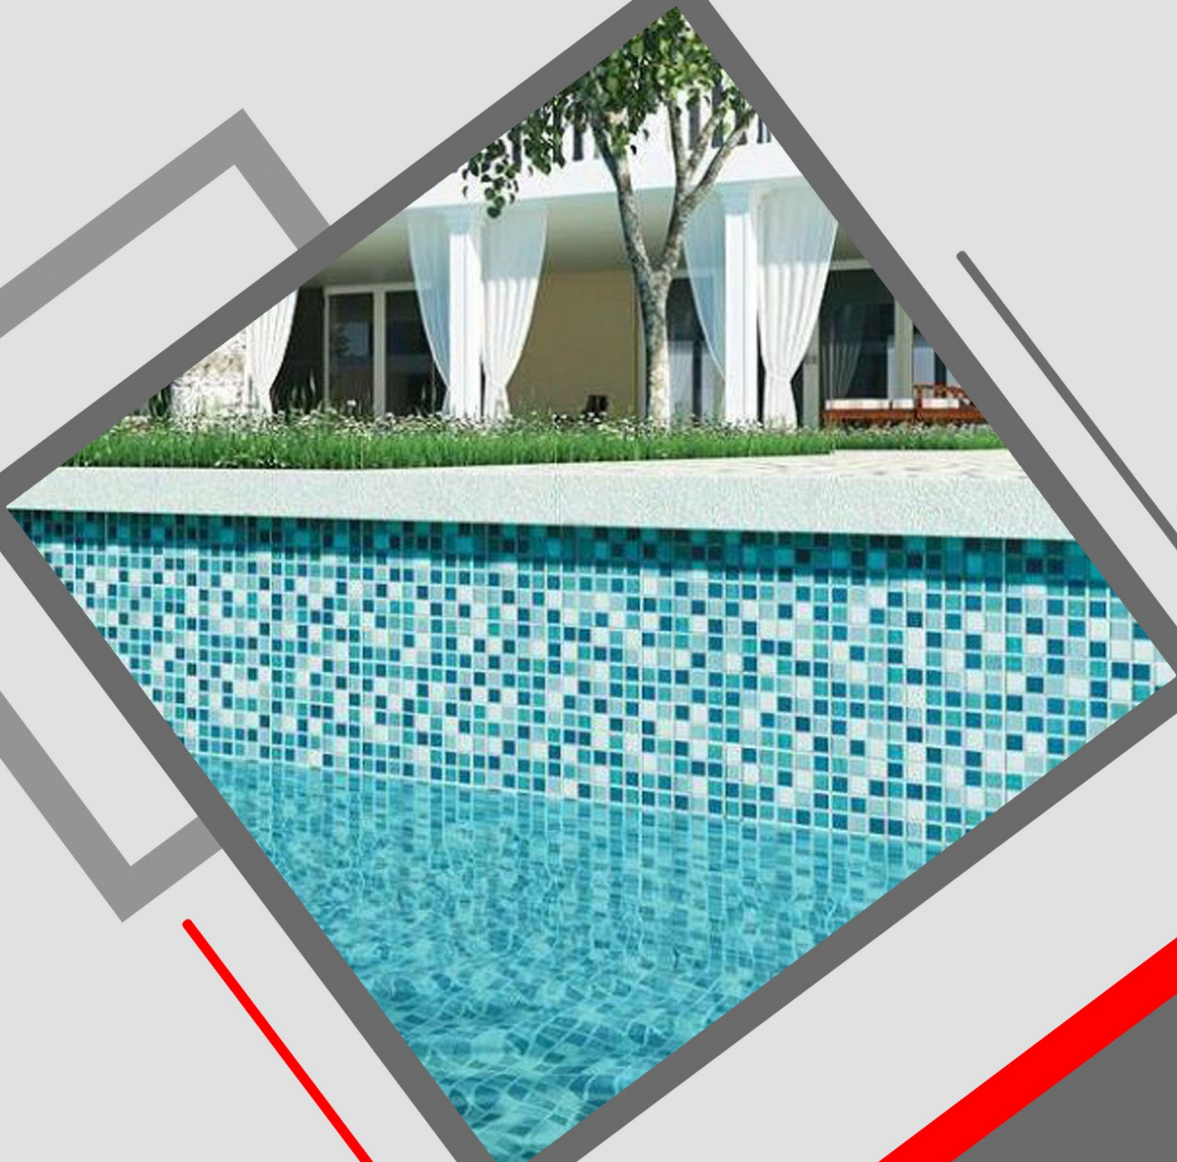

Pool tiles

These tiles have high firmness due to low water absorption and special production process and are resistant to frost. The dimensions of these tiles are usually 20 × 20 and they are produced in flat and prominent designs.

Resistance to cold and heat, resistance to alkaline and acidic conditions, resistance to sunlight, resistance to detergents and resistance to water pressure, especially in deep pools, are important specifications of these tiles.

Tiles with traditional design

Tiles with traditional design come with a unique beauty compared to other tiles with their own special fans. It is used to decorate historical monuments. white, blue, turquoise and orange are the colors used in these tiles. Variety in design and color, the use of paisley patterns, variety in size and high solidity are important specifications of these tiles.

Types of ceramics

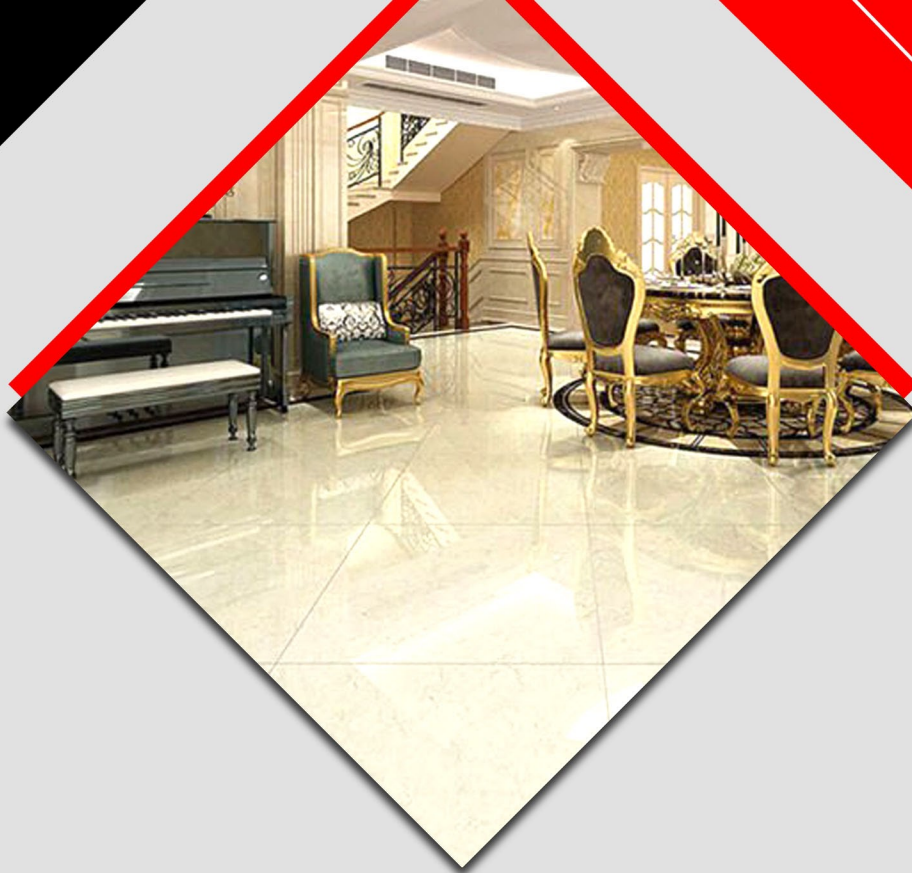

Pavement design ceramics

pavement design ceramics, are used in floors and walls, due to their special effect and physical properties. The design on these ceramics is in the form of small and large stones that look very natural.

Carpet design ceramics

Carpet design ceramics are one of the newest and most attractive ceramic designs that are used for the floor of the living room and kitchen. These ceramics create a carpet design due to their beautiful carpet like appearance. The dimensions of these ceramics are large and there is no seam between them

Granit design ceramics

Granit design ceramics are one of the most popular ceramics and create a luxurious and beautiful look in your decoration. These ceramics have high resistance and are not damaged by climate change. Granite design ceramics are more transparent than granite and are used in homes, malls, laboratories and hospitals.

Porcelain and non-porcelain ceramics

Porcelain and non-porcelain ceramics are very similar in appearance but different in structure and features. Porcelain ceramics are produced from high quality raw materials by new devices under high pressure and temperature and cause strength and low water absorption in them

3D ceramic tiles

3D ceramic tiles have a special charm and beauty and create a special effect to the decoration of the environment and are used as wall and floor coverings. This model of ceramic tiles is produced in various designs and colors and can be easily installed on different surfaces such as concrete, tiles, parquet, cement and stone.
